

Workforce Information Database, Version 2.6.1 Subdirectory Contents

The directories found here contain a number of files related to Version 2.6 of the Workforce Information Database.

Directory Name	Contents
----------------	----------

ACCESS	Archive file WID261PLUS.ZIP contains an Access 2010 database with many of the lookup tables populated and MOST constraints in place..(NOTE: The number of tables and the number of relationships found in this version have exceeded the numbers that can be effectively managed using Access 2013's relationships window. Some relationships do not exist in the database. Most of those relate to the SOCCODE table. The problems showed up as we were populating the SOCCODE table, and we could find no way to make necessary modifications to relationships.)
------------------------	--

TXT	Comma-delimited text versions of lookup tables for which the NCSC furnishes content can be found in this directory.
---------------------	---

Data table content for this version will be made available from a variety of sources:

- An Access database with data populated with the NCSC monthly data updates will be made available in the [national](#) directory.
- Selected data file content will be developed as delimited text and for use with FoxPro 2.6 and found in both the [national](#) and [state-specific](#) directories.
- Delimited text and FoxPro versions of state data files are available from the [state-specific](#) directories on this server.

As data tables are updated, their suitability for use in Version 2.6.1 of the database will be included in e-mail notifications of updates to state Workforce Information Database administrators, appropriate readme files and the file names themselves.

If you have any questions about the files, feel free to contact the NCSC at NCSC.ARC@iowa.gov or by telephone at 515-242-5034.
