Workforce Information Database Schools, Programs and Completions Tables

Introduction

Information about education and training opportunities have become increasingly important to the workforce development community. State Workforce Information units have had varying degrees of success in obtaining this information from state and local education agencies. Some have turned to information gathered by the National Center for Education Statistics (NCES) in its Integrated Postsecondary Education Data System survey (IPEDS – see <http://nces.ed.gov/ipeds/>). The 2015 IPEDS data contain information from 7,500 institutions, private and public, and ranging from certificate programs to doctoral and first professional degrees. They represent information about nearly five million program completions in nearly 240,000 programs.

This document contains the structures of the WID files populated by the NCSC and related database files. Total record counts and notes on the files' creation, content and limitations are included for the files derived from IPEDS.

NOTE ON GEOGRAPHY

Within IPEDS, geography is found only within the Institutional Characteristics (IC) file. Other IPEDS file link to this file through their UNITID variable (INSTCODE in the Workforce Information Database). Generally speaking, each institution will have only one record, and thence one address, in the IC file. This geographic limitation is reflected in the contents of the PROGRAMS, PROGCOMP and SUPPLY tables described by this document. While an institution may offer programs at several locations in several counties, unless there is a record in the IC file for each of those locations, it's impossible to determine which programs and how many program completers are offered at any of the satellite locations. Users should compare institutions in the SCHOOLS table with the list of known institutions for their state in order to determine the potential impact of this limitation.
